

## Quality Audit – Rubber Component Manufacturing Process Audit

### Overview

A client requested technical assistance for the audit of a rubber component manufacturer to establish competence regarding supply of a new component.

### Objectives

- Audit design review and manufacturing capability for new rubber components.
- Make impartial recommendations of capability based on findings.

### Actions

An audit plan was created, reviewed and agreed by all parties.

A two day audit was carried out at the manufacturer's facility reviewing all aspects relevant to component design and production.

The audit results were discussed with manufacturer and a final report was created with conclusions.

### Outcome

The client was able to make a reasoned judgement regarding the manufacturer's capabilities.

The manufacturer was able to review potentially weak areas of its manufacturing and design control systems.
